

4S eConnect[®]

Web centric, Bridging the Information Gap

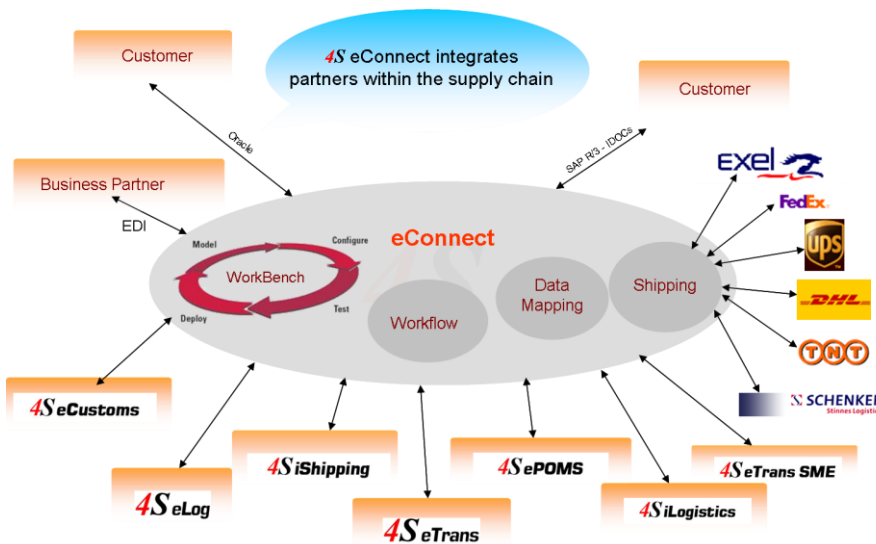

4S eConnect is a component that accommodates a diverse range of information flow between multiple applications. In doing so, it facilitates multiple layers of communications ensuring that information is transmitted to the appropriate applications. When complemented by the 4S eConnect Server, it will manage a variety of transactions and processes in real-time.

KEY CAPABILITIES

- Connects, mediates and controls services and their interactions
- Business process modeling and management
- Operational XML data storage and processing
- Integrated access to relational data sources
- Partner collaboration
- Third-party packaged application and technology integration

KEY BENEFITS

- Agility to meet changing business requirements
- Enterprise-grade reliability and availability
- Improved visibility and control
- Re-use of data and applications

ACCELERATING YOUR SOA SOLUTION

The path to SOA begins with the principles of broad-base service interoperability and the flexibility to easily adapt their interactions to meet new business requirements.

To create new value, you need to harness your existing applications, data and services into managed business processes. And, to understand changing business conditions, you need to monitor the critical operational data that flow through the enterprise. The Sonic ESB Product Family provides the shortest path to this objective.
